OBJECTIVE

Short-term: Become a programmer in interface development and work in a professional.
Long-term: Aim to grow continuously as a developer by taking on challenging tasks and responsibilities. Seek out learning opportunities and work to advance in your career, building the skills to tackle high-level projects

SKILLS

BACKEND

C#: ASP.NET Core MVC / Web API (Web Framework)

FRONT-END

HTML, CSS, Bootstrap

DATABASE

SQL Server, MySQL

TOOLS

Eclipse, Postman, Visual Studio, VsCode, Git

OTHERS

EDUCATION

University of Technology and Education **2022 - 2026**

Specialized: Software Engineering

GPA: 3.0/4.0

PROJECTS

Clone TopCV **10/2024 - 12/2024**

MEMBERS: 4

Position: C# Web Developer
Technologies Used: C#, ASP.NET Core (.NET 8.0), HTML, CSS, JavaScript, SQL Server
Description: A TopCV clone project simulating an online recruitment platform with features like user authentication, job posting/searching, and profile management. Some functions (CV builder, job recommendations, UI/UX) are in progress, and the project will be further expanded toward a fully functional platform.
Key Features:

- Built secure account management for both job seekers and employers.
- Enabled employers to register company profiles and post job listings.
- Designed CRUD functionalities for CVs, job applications, and saved jobs.
- Configured and integrated relational database (SQL Server) for user, job, and application data.

Medical Equipment Management System **04/2025 - 05/2025**

MEMBERS: 4

Position: C# Web Developer
Technologies Used: C#, ASP.NET Core (.NET 8.0), HTML, CSS, JavaScript, SQL Server
Description: The Medical Equipment Management System is a web application that helps healthcare facilities efficiently manage and track medical devices. It stores detailed information for each device (name, code, manufacturer, entry date, status, and usage location) and provides role-based access for administrators, technicians, and medical staff.
Key Features:

- Built secure account and role management for administrators, warehouse managers, staff, and doctors.
- Enabled users to submit and approve equipment borrowing and returning requests.
- Designed CRUD functionalities for medical equipment, categories, and inventory records.
- Configured and integrated SQL Server for relational data storage with Entity Framework.

BeanyDrinks **01/2019 - 05/2019**

- Self-organization, teamwork.
- Analytical, problem-solving.
- Knowing how to self-study well, research.

INTERESTS

- Play sports: Football and Badminton
- Improve foreign language.
- Listening to instrumental music and podcasts for relaxation and self-growth

MEMBERS: 3

Position: Android Developer
Technologies Used: Android Studio, Eclipse IDE, PHP (for API development), SQLServer (database), RESTful API,Postman
Description: The restaurant management app helps staff track tables, take orders, send them to the kitchen, and manage inventory. It provides reports on sales and table turnover, reducing errors and improving service efficiency.
Key Features:

- Built real-time table status management to track available, occupied, and reserved tables.
- Enabled staff to place, update, and send food orders directly to the kitchen system.
- Implemented sales reporting and revenue analytics for performance tracking.
- Developed employee management features including account creation, roles, and activity monitoring.
