Clone TopCV
members: 4
Position: C# Web Developer
Technologies Used: C#, ASP.NET Core (.NET 8.0), HTML, CSS, JavaScript, SQL Server
Description: A TopCV clone project simulating an online recruitment platform with features like user authentication, job posting/searching, and profile management. Some functions (CV builder, job recommendations, UI/UX) are in progress, and the project will be further expanded toward a fully functional platform.
Key Features:

- Built secure account management for both job seekers and employers.
- Enabled employers to register company profiles and post job listings.
- Designed CRUD functionalities for CVs, job applications, and saved jobs.
- Configured and integrated relational database (SQL Server) for user, job, and application data.

04/2025 - 05/2025

Medical Equipment Management System
members: 4
Position: C# Web Developer
Technologies Used: C#, ASP.NET Core (.NET 8.0), HTML, CSS, JavaScript, SQL Server
Description: The Medical Equipment Management System is a web application that helps healthcare facilities efficiently manage and track medical devices. It stores detailed information for each device (name, code, manufacturer, entry date, status, and usage location) and provides role-based access for administrators, technicians, and medical staff.
Key Features:

- Built secure account and role management for administrators, warehouse managers, staff, and doctors.
- Enabled users to submit and approve equipment borrowing and returning requests.
- Designed CRUD functionalities for medical equipment, categories, and inventory records.
- Configured and integrated SQL Server for relational data storage with Entity Framework.

BeanyDrinks
members: 3

Position: Android Developer

Technologies Used: Android Studio, Eclipse IDE, PHP (for API development), SQLServer (database), RESTful API,Postman

Description: The restaurant management app helps staff track tables, take orders, send them to the kitchen, and manage inventory. It provides reports on sales and table turnover, reducing errors and improving service efficiency.

Key Features:

- Built real-time table status management to track available, occupied, and reserved tables.
- Enabled staff to place, update, and send food orders directly to the kitchen system.
- Implemented sales reporting and revenue analytics for performance tracking.
- Developed employee management features including account creation, roles, and activity monitoring.
